Claims:

Claims:

**1.** (Currently Amended) A method for updating a filter engine

opcode tree, the method implemented by a computer comprising a

processor and a memory, the method comprising the following steps:

(a) compiling a new query to derive a series of opcode objects;

(b) traversing the opcode tree according to the series of opcode

objects until an opcode object is encountered that is not included in the

opcode tree, opcode objects being represented in the opcode tree as

opcode nodes; and

(c) adding new opcode tree opcode nodes to correspond to the

encountered opcode object and subsequent opcode objects in the

series of opcode objects;

(d) updating a branch node in the opcode tree to add a reference

to the new opcode nodes, the branch node being referenced from a

parent opcode node that corresponds to a last opcode object from the

series of opcode objects that was found in the traversal of the opcode

tree;

(e) implementing an optimized branch node that includes an

optimized indexed lookup procedure, wherein the optimized lookup

procedure comprises an interval tree function to optimize numeric

interval queries; and

(f) restoring the optimized branch node to a generic branch node

when the optimized branch node is no longer more efficient than the

generic branch code.

**2.** (**Original**) The method as recited in claim 1, wherein one or

more of the steps are performed dynamically at runtime.

**3. (Original)** The method as recited in claim 1, further

comprising performing steps (b) and (c) in a component of the filter

engine.

**4.** (**Original**) The method as recited in claim 1, further

comprising executing the opcode tree against an input to evaluate the

new query and one or more other queries against the input.

Serial No.: 10/783,598 Atty Docket No.: MS1 -2021US

Atty/Agent: Jason F. Lindh

**5.** (Original) The method as recited in claim1, further

comprising:

receiving a request to remove a first query from the opcode tree;

identifying one or more opcode nodes in the opcode tree that

correspond to the first query;

removing any identified opcode node that does not correspond to

a second query.

6. (Canceled)

**7.** (**Previously Presented**) The method as recited in claim

1, the branch node further comprising updating the branch node to

include an indexed lookup routine that references several dependent

opcode nodes that perform a similar function.

8. (Original) The method as recited in claim 7, further

comprising analyzing opcode nodes that depend from the branch node

and including the indexed lookup routine only if including the indexed

lookup routine provides more efficient processing of the dependent

nodes that a generic branch node processing routine.

Serial No.: 10/783,598 Atty Docket No.: MS1 -2021US Atty/Agent: Jason F. Lindh

ECCONONES The Susiness of 17 "

9. (Canceled)

10. (Previously Presented) A filter engine stored on

one or more computer storage media, comprising:

a filter table that includes a plurality of queries, at least two of

the queries including a common prefix;

a compiler configured to compile each query into a series of

opcode blocks;

an opcode tree stored in memory and including opcode nodes

that each correspond to an opcode block such that executing the

opcode nodes evaluates the plurality of queries, at least one opcode

node corresponding to an opcode block included in the common prefix;

an opcode merger configured to merge a new query to the

opcode tree by adding at least one opcode node that corresponds to

the new query to the opcode tree,

wherein, when an opcode node will depend from a branch node

when added to the opcode tree, identifying one or more child opcode

nodes that depend from the branch opcode; and

implementing an optimized branch node that includes an

optimized indexed lookup procedure if such implementation would

Serial No.: 10/783,598 Atty Docket No.: MS1 -2021US

Atty/Agent: Jason F. Lindh

The Susiness of 17 to water brethologies com — \$300 SQS 93500

increase branch processing efficiency and referencing the opcode node

from the optimized branch node, wherein:

the optimized indexed lookup procedure further comprises an

interval tree function to optimize numeric interval queries;

the opcode merger is further configured to restore an optimized

branch node to a generic branch node when the optimized branch node is

no longer more efficient that the generic branch node.

**11. (Original)** The filter engine as recited in claim 10, the

opcode merger further configured to traverse the opcode tree to

determine if an opcode node corresponding to the new query already

exists in the opcode tree and add new opcode nodes that correspond to

query opcode blocks that are not already included in the opcode tree.

**12. (Original)** The filter engine as recited in claim 10,

wherein opcode nodes corresponding to opcode blocks included in a

common prefix are represented as a shared segment in the opcode

tree.

Serial No.: 10/783,598 Atty Docket No.: MS1 -2021US

Atty/Agent: Jason F. Lindh

**13. (Original)** The filter engine as recited in claim 10, wherein queries are merged into the opcode tree dynamically at runtime.

**14. (Original)** The filter engine as recited in claim 10, further comprising XPath queries in the plurality of queries.

**15. (Original)** The filter engine as recited in claim 10, the compiler being further configured to create opcode objects that are configured to merge themselves into an appropriate location in the opcode tree.

- 16. (Canceled)
- 17. (Canceled)
- 18. (Canceled)
- **19. (Previously Presented)** A compiler stored on one or more computer storage media, containing computer-executable instructions for performing the following steps:

Serial No.: 10/783,598 Atty Docket No.: MS1 -2021US Atty/Agent: Jason F. Lindh

receiving a query to be added to an opcode tree that represents

a plurality of queries, at least two of which include similar prefixes;

compiling a guery to produce one or more opcode objects that are each

configured to merge into the opcode tree as an opcode node by

determining an appropriate location in the tree to merge, and merging

into the tree in accordance with a node context of the appropriate

location;

determining a function that the opcode object performs;

determining if a branch node that will reference the opcode node

corresponding to the opcode object also references other opcode nodes

that perform a similar function; and

implementing an optimized branching function in the branch

node including an optimized lookup procedure if the branch node can

be optimized to more efficiently process the opcode nodes that it

references, wherein the optimized lookup procedure comprises an

interval tree function to optimize numeric interval queries; and

restoring the optimized branch node to a generic branch node

when the optimized branch node is no longer more efficient than the

generic branch code.

**20. (Original)** The compiler as recited in claim 19, further comprising producing opcode objects that are further configured to merge into the opcode tree only if an identical opcode object corresponding to a similar query prefix is not already included in the opcode tree

**21. (Original)** The compiler as recited in claim 19, wherein a query further comprises an XPath query.

22. (Canceled)

23. (Canceled)

24. (Canceled)

**25. (Original)** The compiler as recited in claim 19, wherein:

the compiler is configured to receive the query and generate the opcode at runtime; and

the opcode node is configured to merge itself into the opcode tree at runtime.

Serial No.: 10/783,598 Atty Docket No.: MS1 -2021US Atty/Agent: Jason F. Lindh

**26.** (**Previously Presented**) An opcode object stored

on one or more computer storage media, including computer-

executable instructions that, when executed on a computer, perform

the following steps:

determining an appropriate location to merge itself as a new

opcode node in an opcode tree when a query from which the opcode

object is derived is added to a filter table represented by the opcode

tree including opcode nodes that, when executed, evaluate the queries;

evaluating a node context of the location to which the new

opcode node will be added; and

merging itself into the opcode tree by adding and/or modifying

references from an opcode node or a branch node to the new opcode

node,

wherein evaluating a node context further comprises:

identifying a generic branch opcode from which the new node

will depend;

identifying one or more other nodes that depend from the

generic branch opcode that include a similar expression as the new

node; and

ESS TOYES The Stationers of 97 to

if a sufficient number of the one or more other nodes exists,

modifying the generic branch opcode to an optimized branch opcode

that includes an indexed lookup procedure that is optimized to more

efficiently process the similar expressions, wherein the optimized

lookup procedure comprises an interval tree function to optimize

numeric interval queries; and

restoring the optimized branch node to a generic branch node

when the optimized branch node is no longer more efficient than the

generic branch code.

**27. (Original)** The opcode block as recited in claim 26,

further configured to perform the recited steps dynamically at runtime.

**28. (Original)** The opcode block as recited in claim 26,

further configured to perform the recited steps within a .NET

environment.

29. (Canceled)

**30. (Original)** The opcode block as recited in claim 26,

wherein evaluating a node context further comprises:

Serial No.: 10/783,598 Atty Docket No.: MS1 -2021US Atty/Agent: Jason F. Lindh

KOON THE Stationess of NP 18

identifying an optimized branch opcode from which the new node

will depend;

identifying one or more other nodes that depend from the

optimized branch opcode that include a similar expression as the new

node; and

if minimum threshold number of the one or more other nodes is

not met, modifying the optimized branch opcode to a generic branch

opcode that can process the number of one or more other nodes more

efficiently than the optimized branch opcode can.

**31. (Currently Amended)** A method for removing a first

query from an opcode tree, the method implemented by a computer

<u>comprising a processor and a memory, the method</u> comprising:

identifying an opcode tree that includes opcode nodes

representing multiple queries such that when the opcode tree is

executed, each of the multiple queries is evaluated;

identifying one or more opcode nodes that correspond to the first

query;

removing any opcode node that does not correspond to a second

query; and

Serial No.: 10/783,598 Atty Docket No.: MS1 -2021US

Atty/Agent: Jason F. Lindh

ESS TOYES The Stationers of 97 to

modifying a branch node that references an opcode node that is

removed from the opcode tree,

wherein the modifying further comprises removing an optimized

lookup function that includes an indexed lookup routine from the

branch node if removing the branch node renders the lookup function

less efficient than a direct comparison function, wherein the optimized

lookup procedure comprises an interval tree function to optimize

numeric interval queries.

32. (Canceled)

**33. (Previously Presented)** The method as recited in

claim 31, wherein the modifying further comprises removing the branch

node if the branch node references only one other opcode node other

than the opcode node to be removed.

34. (Canceled)

**35. (Previously Presented)** The method as recited in

claim 31, wherein the modifying further comprises implementing an

Serial No.: 10/783,598 Atty Docket No.: MS1 -2021US Atty/Agent: Jason F. Lindh

YONG THE SUSTINGEN OF THE SECOND STATES

optimized processing function in the branch node if the removal of the

branch node creates a context in which the optimized processing

function would increase efficiency of the branch node processing.

**36.** (**Original**) The method as recited in claim 35, wherein

the optimized processing function further comprises one of the

following functions: a hash function; an interval tree function; a

function using tries.

**37.** (**Previously Presented**) One or more computer

storage media, containing computer-executable instructions that, when

executed on a computer, perform the following steps:

identifying an opcode block that corresponds to a query to be

added to an opcode tree that represents multiple queries with a

plurality of opcode nodes;

identifying an appropriate location in an opcode tree to situate

new opcode nodes that correspond to a sequence of opcode objects in

the opcode block, the opcode tree including at least one shared opcode

node that corresponds to at least two of the multiple gueries;

evaluating a location context; and

modifying an opcode node or a branch node to incorporate a new

opcode node,

wherein, the evaluation step further comprises evaluating a

plurality of dependent opcode nodes that depend from a branch node

from which the new opcode node depend; and

the modifying step further comprises modifying the branch node

to include an indexed lookup function if the dependent opcode nodes

perform a similar function and processing the dependent opcode with

the indexed lookup function increases the efficiency thereof, wherein

the optimized lookup procedure comprises an interval tree function to

optimize numeric interval queries.

38. (Canceled)

39. (Canceled)

**40.** (Currently Amended) The one or more computer-

readable media computer storage media as recited in claim 37, wherein

the queries are XPath queries.

Serial No.: 10/783,598 Atty Docket No.: MS1 -2021US Atty/Agent: Jason F. Lindh

ECO TOYES - The Gusiness of 47 <sup>18</sup>

41. (Currently Amended) The one or more computer-

readable media computer storage media as recited in claim 37, wherein

the steps are performed by an inverse query engine.

42. (Currently Amended) The one or more computer-

readable media computer storage media as recited in claim 37, wherein

the identifying step, the evaluating step and the modifying step are

performed by the new opcode node.

43. (Currently Amended) The one or more computer-

readable media computer storage media as recited in claim 37, wherein

the steps are performed in a Common Language Runtime (CLR)

environment.
